

Teachers Worry About Adequate Supplies for Their Students This School Year

For parents and students, this back-to-school season presents unique challenges marked by the COVID-19 pandemic. Whether preparing to head back to the classroom or for virtual learning at home, teachers play a critical role in helping families adjust to this new normal. Clorox is supporting teachers this year and providing supplies for the particular needs of their classrooms, so they don't have to.

The pandemic has created increasing supply challenges for teachers in creating a well-resourced in-person or virtual classroom.

90%

of teachers **pay for supplies out of their own wallets.**

41%

of teachers make **more than five trips a year to keep their classrooms stocked** with school supplies.

41%

of teachers **ask for school supplies as presents** from friends and family.

21%

of teachers **create school supply wish lists** and share the links.

71%

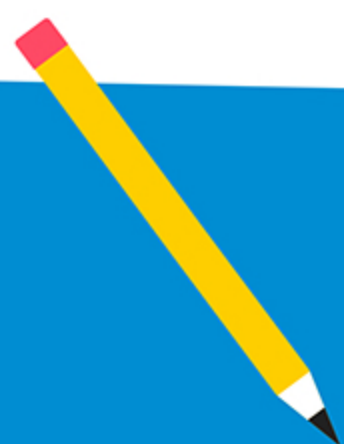

of teachers (seven in ten) **have taught without the supplies needed and nearly two-thirds (64%) have modified lesson plans** based on a shortage of supplies.

Despite their efforts, with the pandemic exacerbating issues with access to supplies, **the majority of teachers (88%) worry students won't have the supplies they need at home to support remote learning.**

This is an even bigger concern for teachers who report working in underserved schools, with **94% of those teachers stating they feel worried about a lack of supplies at students' homes.**

Lesson plans will change this year as teachers and students face a post-pandemic back-to-school season.
